

Service Overview

At Northern Plaza Dental Care, we offer comprehensive dental treatment in the convenience of one location. Our patients appreciate and value our 'On-Time-Appointment' philosophy. We respect the value of your precious time, and to this end we make every effort to not only see you at your appointed time, but to complete your treatment in a timely manner. This efficiency allows us not only to decrease any stress, but to keep our fees reasonable. Everyone wins with our approach.

General Care

Treatment includes routine fillings, cleanings, examinations, sealants, stain removal. We can close spaces between your teeth, and place tooth colored fillings.

We Love Children !

Extra Special attention given to the little ones! Kids love watching Nickelodeon while getting their dental treatment. All basic services available, including Orthodontics.

Non-Metal Restorations

Composite restorations have superior esthetics, and in many cases, help reinforce your tooth due to the mechanical and chemical bonding of the material to your tooth structure. Crowns, inlays, and even bridgework can now be fabricated out of 21st century resins and polymers, resulting in bridgework with no metal showing.

Air Abrasion Decay Removal

This modern technique can remove caries from your tooth without a drill. It is pain free, and usually needle free. By utilizing this technique, we can make your visit less stressful. Children and adults alike are amazed by this new technology.

Veneers

This technique involves the fabrication of thin porcelain facings which are bonded to your tooth. They can correct problems with the color, shape, angulation, and spacing of your teeth, all with a very minimal reduction of tooth structure.

Whitening

No more waiting 7 to 10 days to get a brighter smile! Our office exclusively utilizes the power bleaching products of Discus Dental. You can expect results in as little as ONE HOUR depending on the color of your teeth. This advanced system brightens your teeth at your convenience, and allows you total control over how bright you would like your smile to be.

Dental Implants & Restorations

If the thought of wearing removable dentures frightens you, then implants may be the answer for you. For people who have lost teeth, implants can provide the support for replacement teeth that look more natural and feel more secure. Implants can replace single or multiple teeth as well as help retain a full or partial denture. If you are a denture wearer, you already know about all the problems. Many times uncomfortable, often embarrassing. Eliminating certain foods from your diet for fear of an accident. Adhesives don't taste good, and they don't last more than an hour or two, anyway. At Northern Plaza Dental Care, we have surgically placed and restored hundreds of implants over the past ten years with extraordinary results. Implants help to restore your smile and your confidence.

Periodontal Treatment

In addition to taking care of the decayed and broken down parts of your teeth, it is important to maintain and care for their foundation, otherwise known as your gingiva or 'gums'. Often, periodontal problems go unnoticed since there may not be any outward symptoms. Deep scaling and root planing is completed first, in an effort to allow the gums and bone to heal, minimizing the need for surgery. Medications can effectively reduce bacterial levels, allowing the gums to heal quicker. In addition, proper periodontal maintenance will help decrease the incidence of bad breath. If you're suffering from bad breath, there's a good chance periodontal therapy will solve your problem.

Orthodontic Care

We provide orthodontic treatment for both adults and children. In many instances, minor orthodontic movement of teeth helps in the overall success of a cosmetic rehabilitation. Orthodontic care can be accomplished by either the traditional wired method or by the Invisalign computer assisted CAD/CAM technology system. With Invisalign, there are no metal wires or bands to irritate your mouth. And best of all, most people won't notice you're in treatment. Invisalign®, the clear alternative to braces.

Sedation

For the apprehensive patient, we utilize a combination of local anesthetic, nitrous oxide (sweet air), and oral medications. For those patients who prefer intravenous sedation, special arrangements can be made.

Dentures

Natural looking and well fitting complete or partial dentures can be fabricated for patients who prefer not to have implants, or for those that implants are not an option.

Root Canal Therapy

If the nerve of the tooth becomes inflamed or infected, then root canal therapy can be utilized to save the tooth. Root canal therapy involves the removal of the nerve from the tooth, and the subsequent treatment of any pathology around the tooth. Once root canal therapy is completed the tooth can be restored, once again becoming functional.

Patient Education

Our office utilizes one of the most advanced patient education systems available. Fear of the unknown keeps most patients from seeking necessary dental treatment. The CAESY interactive DVD-ROM system allows patients to view information, short video clips, and computer generated graphics regarding all of the services we provide. Dr. Davantzis and his staff will take the time to thoroughly explain all procedures and necessary treatment before services are rendered. In this way, the fear of the unknown is completely eliminated, thereby decreasing your anxiety and making for a more pleasant visit.
